

## Problem 5: Swap two numbers without using a temporary variable

Input: integer a = "10", b = "50". Output: Strings after swap: a = 50 and b = 10

```
a=int(input("enter a :"))
b=int(input("enter b :"))
a,b=b,a
print("after swap a is :",a)
print("after swap b is :",b)

enter a :10
enter b :50
after swap a is : 50
after swap b is : 10
```
